

PROJECT SOLUTIONS

Moving from Withdrawable to fixed...

The Sewage Water Treatment industry is a typical process industry where the continuous operation can not afford the luxury of regular shutdown periods. Downtime can be critical and costly to the process.

Traditionally, these industries have relied heavily on withdrawable switchgear - the Thames Water Crossness Sewage Treatment Works is now an exception.

The Solution

The requirement was to replace existing switchgear at the Crossness Sewage Treatment Works. Security of supply was vital for this project..

FKI Switchgear offered a new solution: 36 panels of Eclipse fixed pattern switchgear.

This new solution moved away from the conventional withdrawable switchgear - a first for the industry.

The reliability of the Eclipse nullifies the need for withdrawable switchgear by virtue of its constant uninterruptible performance and minimum maintenance.

Complete Customer Satisfaction

FKI Switchgear applied their first class engineering capabilities to provide Crossness Sewage Treatment Works with a new and successful solution.
