

## PROJECT SOLUTIONS

# The GVR.....Weathering the storms

**January 2005 - Severe storms swept across the UK with the North of England, Northern Ireland and Scotland worst hit; thousands of people had to be evacuated due to heavy flooding and the city of Carlisle was completely cut off.**

**How does a regional electricity company (REC) ensure continuity of power as much as is possible in such adverse conditions?**

### **The Solution**

The solution is simple ... Hawker Siddeley Switchgear's GVR Recloser.

Whilst winds of up to 90mph and floods were causing chaos on the ground, the GVR provided some welcome relief to the REC.

Throughout the storms, the GVR gave a significant number of automated operations, providing the REC with that much needed reliability to help maintain their distribution network across the North West of England.

### **Complete Customer Satisfaction**

Withstanding this harsh test of reliability during some of the worst storms ever experienced in the UK, the GVR made a significant contribution to maintain system reliability.

For more information on the GVR and other products from the Hawker Siddeley Switchgear "Fit & Forget" range please visit our website at [www.hss-ltd.com](http://www.hss-ltd.com).
