

PROJECT SOLUTIONS

Docklands Light Railway. . . it's Lightning

A major success story for the Light Rail Industry in the UK, the Docklands Light Railway (DLR) has been central to the regeneration of East London and the Docklands area. Unique to the UK, in that the automated trains are completely driverless, the DLR (part of Transport for London) was the stimulus for a number of new light rail schemes across the UK.

Since its' official opening in 1987, DLR has embarked on a number of extensions, the latest being the 4.4km London City Airport Extension, due to open late 2005.

The Solution

As part of this major new extension, Hawker Siddeley Switchgear supplied DLR with their latest DC switchgear product - the Lightning DC - as well as their successful Eclipse AC switchgear.

Combining our proven DC technologies with the award winning, patented magnetic actuator technology, the Lightning provides a new and innovative DC switchgear solution for DLR.

Complete Customer Satisfaction

As an existing DC supplier to DLR, with the MM74 DC switchgear product, Hawker Siddeley Switchgear pleased to be able to continue this successful working relationship with their latest DC development.

For more information on the Lightning product range please visit our website at www.hss-ltd.com.
