

PROJECT SOLUTIONS

The Mobile Solution

When customers in Iran faced an all too common problem of finding a reliable but temporary power supply, not only did they need to ensure continuity and quality of power supply, but they also needed to reduce their operational costs.

The Solution

For Hawker Siddeley Switchgear the solution to this challenge was simple - a mobile packaged substation, utilising the award winning GVR Recloser.

The requirement was to provide a cost-effective alternative to the traditional option of building new and expensive substations.

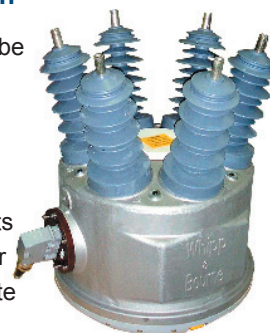

By using an existing 69kV (or 132kV) supply, this mobile substation enabled 15MVA of power to be distributed to six 20kV circuits, each protected by a 27kV GVR recloser with polar control.

One of the main advantages of this mobile substation is the elimination of any construction costs. Used purely on a temporary basis, all building, installation and commissioning costs, traditionally associated with new substations, are no longer incurred.

Complete Customer Satisfaction

Extremely versatile, this solution can be driven and set up anywhere in the world, as and when required.
