

PROJECT SOLUTIONS

The Power of Wind

Wind - clean, inexhaustible and entirely renewable - is the fastest growing source of electricity generation in the world today.

Set to become a major energy source for the coming century, there is no denying the importance of wind to the global community and to the future of our climate.

The Solution

Hawker Siddeley Switchgear's Horizon outdoor open terminal circuit breaker range has been enhanced to allow for connection of distributed generation from a wind farm to a distribution network.

Retaining all of the ratings associated to the ENA assessed sub-station circuit breaker, the Horizon can be either pole-mounted or ground-mounted, depending on customer specifications and planning permissions.

The connection from wind farms to distributed generation requires the circuit breaker to switch out of phase voltage and current, which the Horizon is seen as an ideal solution.

Complete Customer Satisfaction

The Horizon circuit breaker provides wind energy customers with a flexible and expert solution.
